

BRIECH UAS SECOND QUARTER MANAGEMENT PERFORMANCE REPORT (10th June 2026)

REPORTING PERIOD: MARCH – 11th JUNE 2026

SUBMITTED TO: Executive Management

SUBMITTED BY: General Manager Briech UAS

EXECUTIVE SUMMARY

The Second Quarter (Q2) of 2026 was characterized by significant operational, training, production, regulatory compliance, and business development activities undertaken by Briech UAS Limited in support of its strategic objectives and national security initiatives.

During the reporting period, the company successfully conducted specialized First Person View (FPV) Drone Pilot Training for sixteen (16) personnel of the Nigerian Army, produced sixty (60) FPV drones for operational deployment, conducted recurrent and refresher quadcopter pilot training for newly recruited and existing operators, coordinated reconnaissance activities at the Ngaski Mining Site for potential commercial engagement, and developed key regulatory documentation required for compliance with Nigerian Civil Aviation Authority (NCAA) requirements.

The company further strengthened its operational readiness through successful testing and deployment of FPV drone systems to designated operational areas while maintaining strict quality control, safety compliance, and stakeholder engagement throughout project execution.

As General Manager, efforts during the quarter focused on project coordination, resource allocation, stakeholder management, quality assurance, regulatory compliance, operational support, and business development initiatives aimed at positioning Briech UAS as a leading indigenous unmanned aerial systems provider in Nigeria.

1. MONTHLY BUSINESS PERFORMANCE REPORT

Business Overview

The reporting period witnessed a significant increase in operational activities driven by military training support, drone production projects, regulatory compliance initiatives, and strategic business development efforts.

The company's activities during the quarter were primarily concentrated in the following areas:

- Military drone training and capacity development.
- FPV drone production and deployment.
- Operational support services.
- Regulatory compliance and certification preparation.
- Technical documentation development.
- Strategic business development and reconnaissance operations.

March 2026 Activities

FPV Drone Pilot Training Programme

Period: 2 March – 21 March 2026

Client: Ministry of defence, Nigerian Army

Participants: 16 Personnel

Objective:

To develop indigenous FPV drone operational capabilities and improve tactical drone deployment competencies among Nigerian Army personnel.

Training Modules Included:

- Introduction to FPV Drone Systems
- Drone Components and Architecture
- Radio Communication Systems
- Flight Safety Procedures
- Mission Planning and Execution
- Tactical Employment of FPV Systems
- Flight Simulation
- Practical Flight Operations
- Emergency Procedures
- Maintenance and Troubleshooting
- Payload Integration
- Operational Risk Assessment

Management Coordination Activities:

- Training schedule development
- Resource allocation
- Instructor coordination
- Equipment availability management
- Safety supervision
- Stakeholder liaison with military representatives

Outcome:

- Successful completion of training by all 16 participants.
- Enhanced operational capability of personnel.
- Strengthened relationship between Briech UAS and the Nigerian Army.

- Identification of future training opportunities.

March – April 2026 Activities

Production and testing of Sixty (60) FPV Drones

Period: 25 March – 5 April 2026

Project Objective:

To manufacture and configure sixty operational FPV drone systems for field deployment for the ministry of defence and Zamfara state government.

Activities Executed:

- Procurement of components.
- Inventory management.
- Assembly operations.
- Wiring and integration.
- Flight controller programming.
- Communication system installation.
- Payload integration.
- Quality assurance inspections.
- Functional testing.

Management Oversight:

- Production scheduling.
- Resource coordination.
- Vendor management.
- Quality control supervision.
- Technical team coordination.
- Risk management.

Project Outcome:

- 60 FPV drone systems successfully completed.
- Production achieved within planned timeline.
- All units passed internal quality assurance inspections.
- Systems prepared for operational deployment.

April – May 2026 Activities

Testing and Operational Deployment

Period: 9 April – 29 May 2026

Activities Conducted:

- Ground testing in Abuja for the representatives of the Nigerian Army and in Gusau Zamfara State also for the Nigerian army.
- Communication verification.
- Flight performance assessment.
- Payload functionality testing.
- Endurance testing.
- Acceptance testing.

Deployment Activities:

- Packaging and transportation.
- Documentation and handover.
- Operational support.
- End-user familiarization.

Outcome:

- Successful deployment of all completed systems (50 drones and 50 explosives to the Nigerian Army in Zamfara and Zamfara state Government).
- Positive operational feedback received (all feedbacks and observations were taken into account and some solutions were provided while other are being processed).
- Conduct of refresher training to the personnel of the Nigerian Army in Zamfara for the operation of the FPV drones.
- No major technical failures recorded during acceptance phase, however, all observation from the clients where well noted.

April – May 2026 Activities

NCAA Compliance and Regulatory Certification Project

Period: 18 April – 20 May 2026 (to date)

Objective:

To establish the regulatory framework and operational documentation required for NCAA registration and certification.

Documents Developed and submitted in softcopy:

- Operations Manual
- Safety Management Manual
- Maintenance Control Procedures
- Training Procedures Manual
- Emergency Response Procedures
- Operational Risk Assessment Framework
- Compliance Monitoring Procedures
- Record Management Procedures

Management Activities:

- Regulatory research.
- Documentation review.
- Internal stakeholder consultations.
- Compliance gap assessment.
- Manual development and validation.

Outcome:

- Significant progress achieved toward NCAA certification readiness.
- Improved organizational governance and documentation systems.
- Enhanced regulatory compliance posture.

5 – 30 May 2026 Activities**Quadcopter Pilot Training Programme**

In collaboration with:

- Group Human Resources Department
- Group Training Manager

Participants:

- Newly recruited pilots
- Existing operational pilots from various camps

Training Focus Areas:

- Flight proficiency enhancement.
- Mission planning.
- Airspace awareness.
- Emergency procedures.
- Operational safety.

- Equipment maintenance.
- Flight data management.

Outcome:

- Improved pilot proficiency.
- Standardized operational practices.
- Enhanced safety awareness.

Kindly Note: A copy of training manual and material is attached.

STAFF PERFORMANCE AND HUMAN RESOURCE REPORT

Workforce Management Overview

The reporting period required significant interdepartmental collaboration due to the simultaneous execution of training programmes, production activities, deployment operations, compliance projects, maintenance support, and research initiatives.

Staff Productivity

All departments contributed significantly toward achieving operational objectives.

Employee Performance Highlights

Successful execution of multiple projects within schedule.

Effective collaboration between engineering, operations, training, logistics, and compliance teams. Increased innovation through departmental research projects.

This report presents the outcome of the staff appraisal conducted by the Human Resources Department. The purpose of the appraisal was to evaluate employee performance, identify strengths and areas for improvement and support management in decision making regarding training, retrenchment, promotion and overall workforce development.

STAFF PERFORMANCE APPRAISALS FOR THE MONTH OF MARCH 2026 AND WITHIN THE PERIOD UNDER REVIEW

1. Objectives of the Appraisal

The appraisal covered staff from all departments in Briech UAS, it was conducted to achieve the following objectives:

- Assess staff performance against assigned duties and responsibilities.
- Identify high-performing employees.
- Identify staff who require training or improvement in certain areas
- Promote accountability and productivity within the organization.
- Identify staff who are performing below expectation.

2. Method of Appraisal

The appraisal was conducted using the following methods:

- Evaluation of staff attendance, punctuality and work attitude.
- Assessment of completed projects and assigned tasks
- Assessment of Key performance indicators.
- Self-assessment appraisal.

3. Key Performance Areas Evaluated

The following performance indicators were considered during the appraisal:

- Job knowledge and skill
- Work quality
- Productivity and efficiency
- Punctuality
- Team work and collaboration
- Initiative and problem solving

- Communication skills

5. Summary of Findings

The appraisal revealed the following:

- High performers: some employees demonstrated excellent performance, consistency and dedication to their duties. These staff consistently met or exceeded their KPI's and contributed significantly to project delivery.
- Satisfactory performers: A number of employees met their expected responsibilities but showed areas requiring improvement such as task completion speed, documentation accuracy and collaborative communication.
- Below average performers: A few employees showed low productivity due to factors such as delay in completing assigned tasks and limited technical proficiency. These employees may require additional supervision, training or performance improvement plans.

5. Key Observations

During the appraisal exercise, the following observations were made:

- Technical departments require continuous training due to the specialized nature of drone technology.
- Documentation and data management processes need improvement for better tracking
- Staff motivation and recognition may improve overall productivity
- The assessed employees met the minimum performance expectations for the review period. There were no major performance-related red flags recorded against the majority of the workforce

A copy of the data sheet is attached to show scores for individual staff

INVENTORY AND ASSET MANAGEMENT REPORT

The Briech UAS has an inventory management system software where all stock records are being monitored. However, a copy of available equipment is attached to this report.

FINANCIAL ACCOUNTABILITY REPORT

Financial Overview

The company's financial activities during the reporting period were primarily driven by operational projects, production activities, training services, maintenance support, and research initiatives while all transaction are via the companies requisition portal and all record of expenses' are deposited with the account officer in Briech UAS.

Major Expenditure Areas

- Drone components procurement.
- Payload production materials.
- Training logistics.
- Operational testing.
- Deployment support.
- Maintenance and repair activities.
- Research and Development projects.
- Compliance documentation development.

Revenue Sources

- Military training services.
- Drone production projects.
- Technical consultancy.
- Maintenance support services.
- Operational support activities.

Financial Controls

- Procurement procedures adhered to.
- Expenditure approvals monitored as all financial transaction are via the company requisition portals.
- Resource utilization tracked as all records are with the briech UAS account office.
- Inventory reconciliation conducted.
- Financial Accountability
- No major financial irregularities were reported during the period.

A summary of financial statement is attached to this report.

BUSINESS DEVELOPMENT ACTIVITIES

1. Stakeholder Engagement, Strategic Liaison and Corporate Representation

During the reporting period, the General Manager maintained continuous coordination and communication with key operational stakeholders and clients to ensure effective project execution, customer satisfaction, and alignment with operational requirements.

Strategic Client Engagement

Regular engagements were conducted with key operational partners and clients including:

- Theatre Command, Operation FUSHIN YAMMA Gusau Zamfara State.
- Department of State Services (DSS) Headquarters, Gusau, Zamfara State.
- Military operational commanders.
- Security and intelligence stakeholders.
- reception of visitors from Government agencies and strategic partners.

These engagements focused on:

- Operational updates.
- Project coordination.
- Customer feedback.
- Technical support requirements.
- Future operational needs assessment.
- Strengthening institutional relationships.
- Identification of new collaboration opportunities.

The continuous engagement with clients significantly enhanced communication channels, improved customer confidence, and

strengthened the company's reputation as a reliable operational partner as well as integration of feedbacks in R&D project and rectification/modification.

Corporate Presentations and Technical Demonstrations

As part of the company's stakeholder engagement and business development strategy, Briech UAS hosted several high-profile visits and technical presentations during the reporting period.

Notable visitors included:

- Senior officials of the Nigerian Police Force lead by the inspector general of police.
- Students and officials of the Army War College Nigeria.
- Personnel from the Nigerian Army School of Infantry.
- Representatives from Army Research and Development establishments.
- The Honourable Minister of Science and Technology and accompanying officials.
- Other government agencies and strategic stakeholders.

Activities Conducted During Visits

- Corporate presentations.
- Facility tours.
- Technical demonstrations of drone systems.
- Product capability showcases.
- Research and Development presentations.
- Operational briefings.
- Interactive question-and-answer sessions.
- Discussions on emerging technological opportunities.

Outcomes Achieved

- Increased awareness of Briech UAS capabilities.

- Enhanced institutional visibility.
- Strengthened relationships with strategic stakeholders.
- Improved brand perception.
- Increased interest in future collaborations.
- Identification of potential business opportunities.
- Reinforcement of the company's position as a leading indigenous drone technology company.

2. Signing of Memorandum of Understanding (MoU) with DICON (2nd April 2026)

A major strategic milestone achieved during the reporting period was the successful signing of a Memorandum of Understanding (MoU) between Briech UAS and Defence Industries Corporation of Nigeria (DICON).

The partnership is intended to promote collaboration in:

- Indigenous drone technology development
- Defence systems innovation
- Technical knowledge sharing
- Local manufacturing and production capacity expansion
- Joint research and development initiatives

The MoU establishes an important framework for strengthening Nigeria's local defence technology ecosystem and advancing strategic self-reliance

3. Ngaski Mining Site Reconnaissance Operation

Period: 4 – 6 June 2026

Location: Libata Ngaski LGA, Kebbi State

Objective: To conduct aerial reconnaissance and feasibility assessment for potential commercial engagement and service provision within the mining sector.

Activities Conducted:

- Preliminary stakeholder engagement.
- Site survey and route planning.
- Reconnaissance mission coordination.
- Terrain assessment.
- Access route analysis.
- Aerial data collection.
- Operational feasibility evaluation.

Management Role:

- Mission planning.
- Stakeholder coordination.
- Team deployment.
- Risk assessment.
- Operational supervision.
- Reporting and recommendations.

Key Findings:

- Site presents significant opportunities for drone-based surveying and monitoring services.
- Potential exists for long-term commercial engagement.

- Opportunities identified for aerial mapping, stockpile monitoring, security surveillance, environmental monitoring, and progress tracking.

Strategic Significance:

The operation represents Briech UAS' continued expansion beyond defense applications into commercial sectors such as mining, infrastructure, environmental monitoring, and industrial inspection.

A comprehensive report of the exercise is attached to this report.

Recommendations:

- Pursue formal engagement with mining stakeholders.
- Develop a proposal for aerial survey services.
- Explore long-term monitoring contracts.
- Conduct detailed technical and commercial feasibility assessments.

Business Development Summary

The business development activities undertaken during the reporting period significantly contributed to strengthening Briech UAS' market presence, stakeholder confidence, and future growth prospects.

Through continuous engagement with military formations, security agencies, government institutions, regulatory bodies, academic establishments, and prospective commercial clients, the company successfully expanded its professional network and enhanced awareness of its operational capabilities.

The successful coordination of the Ngaski Mining Site reconnaissance mission opened new opportunities within the mining and industrial sectors, while ongoing engagements with military and security stakeholders further positioned the company for future operational support contracts, training programmes, drone supply projects, and technical consultancy services.

Furthermore Technical partnership, facility visits, technical demonstrations, and presentations delivered to senior government officials, military institutions, research organizations, and security

agencies provided valuable opportunities to showcase the company's indigenous technological capabilities, ongoing research and development initiatives, and operational achievements.

Collectively, these activities strengthened the company's reputation, increased stakeholder confidence, enhanced market visibility, and created pathways for future strategic partnerships, commercial engagements, and long-term business growth.

RESEARCH, DEVELOPMENT AND INNOVATION

In line with Briech UAS Limited's commitment to continuous improvement, operational excellence, and indigenous technology development, all technical departments were actively engaged in Research and Development (R&D) activities throughout the reporting period.

The primary objective of these initiatives was to develop practical solutions to challenges encountered during field operations, improve product reliability, enhance operational effectiveness, reduce dependence on foreign technologies, and strengthen the company's competitive advantage within the unmanned aviation sector.

Research efforts were largely driven by operational feedback received from deployed systems, pilot experiences, maintenance observations, customer requirements, and emerging technological trends within the global UAS industry.

1. Moulding Unit Research and Development Activities

Project Focus: Improvement of Airframe Finishing Processes

The Moulding Unit conducted extensive research into improving the structural finishing and aesthetic quality of drone airframes produced by the company.

Activities Conducted:

- Evaluation of existing moulding and finishing procedures.
- Assessment of surface treatment techniques.
- Development of improved finishing standards.
- Investigation of lightweight finishing materials.
- Optimization of post-production processing methods.

Expected Benefits:

- Improved airframe appearance.
- Enhanced structural durability.
- Reduced production defects.
- Increased product quality consistency.
- Improved customer acceptance and operational reliability.

2. 3D Design and CNC Manufacturing Unit**Project Focus:** Design and Development of New Drone Variants

The department continued to support product development initiatives through computer-aided design (CAD), rapid prototyping, and CNC manufacturing activities.

Projects Undertaken:

- **Striker Drone Development**

Activities included:

- Airframe design optimization.
- Structural analysis.
- Payload integration studies.
- Prototype component development.

- **Apprentice Drone Development**

Activities included:

- Development of a low-cost training platform.
- Flight stability optimization.
- Ease-of-maintenance considerations.
- Modular component design.

- **Bomb Carrier for Argini Drone**

Activities included:

- Payload attachment mechanisms.
- Release system integration.
- Structural reinforcement studies.
- Flight performance impact assessment.

Achievements:

- Multiple design concepts developed.
- Prototype components manufactured.
- Improved indigenous design capability established.

- **Explosive Systems Development Unit**

Project Focus: Improvement of Payload Deployment Systems

The Explosive Systems Unit focused on enhancing the effectiveness, reliability, and safety of payload deployment mechanisms.

Activities Conducted:

- Modification of trigger systems.
- Reliability testing of release mechanisms.
- Improvement of deployment efficiency.
- System integration studies.
- Evaluation of upgraded payload configurations.

Operational Benefits:

- Improved deployment reliability.
- Enhanced mission effectiveness.
- Increased operational flexibility.
- Reduced system failures.

3. Electrical and Electronics Engineering Unit

Project Focus:

Automation and Ground Support Systems Development

The Electrical and Electronics Unit conducted several innovative projects aimed at improving operational efficiency and communications performance.

Key Projects:

Automated Telemetry Antenna Elevation System

Development activities included:

- Design of automated antenna positioning systems.
- Elevation control mechanisms.
- Signal optimization studies.
- Remote operation capabilities.

Expected benefits:

- Improved telemetry reception.
- Increased operational range.
- Enhanced communication stability.

Automated Refuelling and Defueling Unit

Development activities included:

- System design and fabrication.
- Fuel transfer automation.
- Safety control integration.

- Operational testing.

Expected benefits:

- Reduced fueling time.
- Improved operational safety.
- Reduced fuel handling risks.
- Increased mission turnaround efficiency.

4. Software Development and Programming Unit

Project Focus: Development of Indigenous Software Solutions

The Programming Unit continued development of locally engineered software systems to support operational independence, security, and process automation.

Projects Undertaken

Local Flight Interface Firmware Development

Activities:

- Development of proprietary flight control interfaces.
- Flight management system enhancements.
- Improved operational customization.

Drone Security Enhancement Features

Activities:

- Anti-interference mechanisms.
- Security architecture development.
- Access control improvements.

Artificial Intelligence Integration

Research Areas:

- Autonomous decision support.

- Target recognition algorithms.
- Intelligent mission assistance.

Quality Management System (QMS) Software

Purpose: To digitize and automate:

- Quality assurance processes.
- Quality control activities.
- Audit management.
- Documentation control.
- Trend analysis and reporting.

Store and Inventory Management System

Purpose: To improve:

- Inventory visibility.
- Asset tracking.
- Procurement planning.
- Stock accountability.

Automatic Target Tracking System for FPV, fixed wing and all other accessories for the Drones

Activities:

- Computer vision integration.
- AI-assisted tracking algorithms.
- Target identification studies.
- Autonomous tracking capabilities.

Expected Benefits:

- Improved operational effectiveness.

- Enhanced target acquisition.
- Reduced operator workload.
- Increased mission success rates.

5. FPV Systems Development Unit

Project Focus: Improvement of FPV Communication and Tracking Systems. The FPV Unit concentrated on enhancing video transmission quality, communication range, and tracking accuracy.

Key Projects

360-Degree Antenna Tracking System

Activities:

- Design and testing of automatic tracking mechanisms.
- Signal tracking optimization.
- Dynamic positioning capability development.

Expected Benefits:

- Continuous signal lock.
- Improved operational range.
- Enhanced communication reliability.

High-Quality Video Transmission System

Activities:

- Evaluation of video transmission technologies.
- Image quality optimization.
- Signal enhancement studies.

Expected Benefits:

- Improved situational awareness.
- Better target identification.
- Enhanced mission effectiveness.

High-Gain Antenna Integration**Activities:**

- Selection and testing of high-gain antenna systems.
- Range performance assessment.
- System compatibility evaluation.

Expected Benefits:

- Extended communication range.
- Improved signal quality.
- Enhanced operational reliability.

Management Assessment of R&D Activities

The Research and Development initiatives undertaken during the reporting period demonstrate Briech UAS Limited's commitment to innovation, self-reliance, and continuous technological advancement and to ensure all customer feedbacks, expectation and observations were timely rectified and at the same time keeping the staff more engaged with activities.

These projects are expected to:

- Improve operational effectiveness.
- Enhance product quality and reliability.
- Strengthen indigenous drone manufacturing capability.
- Reduce dependence on imported technologies.
- Improve regulatory compliance readiness.
- Support future commercial and defense contracts.
- Position Briech UAS as a leading innovation-driven unmanned aviation company in Nigeria and across Africa.

SAFETY MANAGEMENT, OPERATIONAL OVERSIGHT AND FLEET SUPPORT FOR THE GROUP CAMP OPERATIONS

During the reporting period, Briech UAS maintained a strong commitment to operational safety, fleet serviceability, pilot competency, and mission effectiveness across all operational camps. Under the leadership and direct supervision of the General Manager, a comprehensive safety oversight framework was implemented to support drone operations, reduce operational risks, improve pilot decision-making, and ensure maximum availability of operational assets.

The management team continued to provide technical guidance, operational support, safety supervision, and maintenance coordination for all deployed drone systems, resulting in a significant improvement in operational performance and safety outcomes.

FLEET MAINTENANCE AND REPAIR SUPPORT

Throughout the reporting period and operations, Briech UAS successfully coordinated and supervised the maintenance, servicing, troubleshooting, and repair of drone systems deployed across various operational camps and provides operational guidance to the field pilots.

Activities Conducted

- Scheduled preventive maintenance of operational drones.
- Corrective maintenance and repair of damaged systems.
- Replacement of defective components.
- Flight control system inspections.
- Power system checks and servicing.
- Communication system maintenance.
- Payload system inspections.
- Airframe repairs and structural assessments.
- Post-mission technical evaluations.
- Technical and operational support to field Pilots.

Outcomes

- Improved operational availability of drone assets.
- Increased mission readiness across operational locations.
- Reduced downtime of deployed systems.
- Extended service life of operational platforms.
- Improved reliability of fielded equipment.

OPERATIONAL GUIDANCE AND PILOT SUPPORT

Briech UAS continued to provide operational guidance and technical support to drone pilots operating in various camps and operational locations.

Areas of Guidance

- Mission planning procedures.
- Pre-flight inspection requirements.
- Risk assessment procedures.
- Airspace awareness
- Weather updates and guidance
- Emergency response procedures.
- Operational decision-making.
- Equipment handling and preservation.
- Mission debriefing procedures.
- Safety reporting requirements.

Regular communication channels were maintained with pilots to ensure operational issues were promptly addressed and lessons learned were shared across all operating locations.

Outcomes

- Improved pilot proficiency.
- Better mission planning and execution.

- Increased compliance with operational procedures.
- Enhanced safety awareness.
- Improved standardization of flight operations.

HUMAN FACTORS AND CREW RESOURCE MANAGEMENT (CRM) PROGRAMME

Recognizing that human error remains one of the leading causes of aviation incidents worldwide, management placed significant emphasis on Human Factors awareness and Crew Resource Management (CRM) throughout the reporting period.

Focus Areas

- Situational awareness.
- Decision-making under pressure.
- Fatigue management.
- Communication effectiveness.
- Stress management.
- Threat and error management.
- Risk perception.
- Leadership and teamwork.
- Operational discipline.
- Mission planning and preparation.

Regular operational reminders, safety advisories, and professional guidance were disseminated to pilots and operational personnel to reinforce safe operating practices.

Outcome

The consistent emphasis on human factors and crew resource management significantly enhanced pilot awareness and operational discipline, thereby reducing exposure to operational risks. This reduced operational failure and drone mishap to the barest minimum.

SAFETY TIPS AND CONTINUOUS SAFETY EDUCATION PROGRAMME

To further strengthen the company's safety culture, periodic safety awareness sessions and safety tip briefings were conducted throughout the reporting period.

Topics Covered

- Flight safety best practices.
- Common causes of drone accidents.
- Weather considerations.
- Battery safety management.
- Equipment inspection procedures.
- Emergency response actions.
- Operational risk management.
- Lessons learned from previous operations.
- Airspace management.
- Maintenance awareness.

Delivery Methods

- Physical safety briefings.
- Online operational advisories.
- Safety circulars.
- Camp-level engagement sessions.
- One-on-one technical mentoring.

Benefits Achieved

- Increased safety awareness among pilots.
- Improved compliance with operational procedures.
- Enhanced reporting culture.
- Better understanding of operational risks.
- Strengthened organizational safety culture.

OPERATIONAL SAFETY PERFORMANCE

One of the most significant achievements during the reporting period was the exceptional safety performance recorded across all supported operations.

SAFETY STATISTICS

- Zero fatal incidents.
- Zero major accidents.
- Zero significant operational mishaps.
- No reported loss of operational assets due to pilot negligence.
- Significant reduction in operational risk exposure.

Key Contributing Factors

- Strong management oversight.
- Effective maintenance programme.
- Continuous pilot engagement.
- Regular safety education.
- Emphasis on human factors awareness.
- Effective crew resource management practices.
- Prompt technical support.
- Improved operational procedures.

MANAGEMENT ASSESSMENT

The safety performance achieved during the reporting period demonstrates the effectiveness of Briech UAS' proactive safety management approach. Through continuous pilot engagement, regular maintenance support, safety awareness programmes, and operational oversight, the company successfully maintained a high level of operational reliability while minimizing risks associated with drone operations.

The achievement of near-zero operational incidents during a period characterized by intensive training, production, testing, deployment, and field operations reflects the professionalism, discipline, and commitment of both management and operational personnel.

MANAGEMENT PERFORMANCE SUMMARY

During the reporting period, management successfully coordinated multiple high-priority projects simultaneously, including:

- Training of 16 Nigerian Army FPV operators.
- Production of 60 FPV drones.
- Operational testing and deployment activities.
- NCAA compliance documentation project.
- Recurrent pilot training programmes.
- Business development reconnaissance operations in Ngaski.

Key management achievements include:

- Successful project delivery within planned timelines.
- Effective stakeholder management.
- Improved regulatory readiness.
- Enhanced workforce capability.
- Expansion of business opportunities.
- Strengthened operational capacity.

CONCLUSION

The Second Quarter (March–June 2026) represents one of the most productive and strategically significant periods in the growth and development of Briech UAS Limited. During the reporting period, the company successfully executed multiple high-impact projects across training, production, operations, research and development, regulatory compliance, maintenance support, and business development while maintaining a strong commitment to safety, quality, and operational excellence.

Notable achievements during the quarter included the successful training of sixteen (16) Nigerian Army personnel on FPV drone operations, production and deployment of sixty (60) FPV drone systems for operational use, recurrent training and proficiency enhancement of newly recruited and existing pilots, development of NCAA-compliant operational manuals and certification documentation, and the successful coordination of reconnaissance activities at the Ngaski Mining Site to support potential commercial engagements.

In addition to operational deliverables, all technical departments actively participated in research and development initiatives aimed at addressing emerging operational challenges and improving the company's technological capabilities. Significant progress was recorded in drone design and manufacturing, payload systems enhancement, communications technology, software development, automation systems, artificial intelligence applications, inventory management systems, and advanced FPV technologies. These initiatives continue to strengthen Briech UAS' position as an indigenous technology-driven unmanned aviation company capable of developing innovative solutions tailored to local operational requirements.

The company also maintained a robust maintenance and technical support programme for drones deployed across operational camps, ensuring fleet serviceability and mission readiness. Through continuous engagement with pilots, regular safety awareness campaigns, recurrent Crew Resource Management (CRM) training, Human Factors education, and proactive operational oversight, Briech UAS successfully achieved an outstanding safety record during the reporting period. No major accidents, operational mishaps, or significant drone losses were

recorded, reflecting the effectiveness of the company's safety culture and management systems.

The achievements recorded during this quarter were made possible through effective collaboration among all departments, dedication of staff, strong stakeholder relationships, and management's commitment to operational excellence. As General Manager, strategic emphasis was placed on project coordination, personnel development, operational support, regulatory compliance, innovation, risk management, and business growth, resulting in measurable improvements across all key performance areas.

Going forward, Briech UAS remains committed to expanding its operational capabilities, accelerating regulatory certification efforts, strengthening research and development programmes, increasing indigenous manufacturing capacity, enhancing safety management systems, and pursuing new opportunities within the defence, mining, infrastructure, surveillance, mapping, and commercial sectors.

The successes achieved during this reporting period have positioned Briech UAS for sustained growth and have further reinforced the company's reputation as a leading provider of unmanned aerial systems, training, technical support, and innovative drone solutions in Nigeria and beyond.

Respectfully Submitted,

A blue ink signature of the General Manager, written over a horizontal line.
