

H2 2026 STRATEGIC PLAN

July – December 2026

Luftreiber Automobile Service Center

Theme: Building structure behind growth

Purpose of the Plan

Why this plan is required after the first half-year review

A Simple Story for the Second Half

Core message: the second half is not only about more volume — it is about stronger control, capacity and customer experience.

First-Half Achievements at a Glance

Toyota Partnership

Improved credibility and platform for Toyota service, recall support and customer confidence.

Toyota Trainings

CRM, warranty and service-process exposure strengthened documentation and service standards.

Process Flow

Clear responsibilities now defined from customer arrival to delivery and follow-up.

Customer Follow-Up

Structured post-delivery follow-up introduced for feedback, complaints tracking and retention.

Workshop Visibility

New pylon, flags and internal/external signages improved visibility on the busy road.

Operational Control

Daily job tracking, procurement review and in-house system planning were initiated.

Key lesson: growth is real, but the structure behind growth must now be strengthened through people, process, systems, parts control, space and training.

H1 Review & Growth Snapshot

Trend interpretation

The business is growing in vehicles, revenue activity and cash flow activity. The next challenge is to support that growth with better structure and control.

Current Position and Key Challenges

The case for the second half-year plan

Challenge → Impact → Strategic Response

Bottom line: demand is strong, but the operating backbone must catch up in people, parts, space, systems, customer management and EV readiness.

Seven Focus Pillars

All seven pillars work together to move the workshop from growth pressure to controlled and scalable performance.

Focus areas should be managed as one connected strategy, not as separate activities.

Critical Enablers Needed

What must be in place for the strategy to work

Five Enablers that Unlock the Plan

These enablers are the practical control points required to make the workshop process, customer experience and growth plan work.

July–December 2026 Roadmap

PHASE 1

July – September 2026
Stabilize + prepare growth

Process flow + daily job tracking

Recruit key operational staff

Strengthen procurement + vendor support

Continue in-house garage system

EV readiness for minor inspection / low-risk repairs

Build partnerships with EV car sellers

Market higher-revenue brands and services

PHASE 2

October – December 2026
Expand + strengthen

Progress expansion / new location plan

Strengthen Toyota and fleet development

Improve technical capacity + staff training

Advance EV readiness from pilot to controlled service

Use system reports for management decisions

Review performance and scale successful marketing

Monthly review should track recruitment, EV readiness, seller partnerships, procurement delays, customer feedback and system usage.

Management Approval

Recruitment

Approve key operational and technical roles

Vendor Support

Support vendor pressure reduction, reduce or clear debts and regain supplier confidence

Garage System

Approve continued in-house system development

Expansion

Support additional space / new location planning

Training + EV

Support training, EV tools, workshop setup

Marketing

Support Toyota, Mercedes-Benz, bodyshop, fleet and premium-vehicle visibility

Request: approve the structure and support required to move from growth pressure to stable, controlled performance.

What Success Should Look Like

Workshop control

Clearer workflow, job allocation, tracking and quality checks

Growth readiness

Better Toyota, fleet, bodyshop, premium and EV opportunity capture

Customer experience

Better reception, updates, delivery and post-service follow-up

By December 2026

Stronger, more controlled operations

Parts + inventory

Improved costing, store control and supplier coordination

Management visibility

Better reporting and decision-making through system and reviews

Technical capacity

Stronger Japanese, AC, electrical, Mercedes-Benz and EV readiness

Overall result: a stronger operating foundation for sustainable growth, better customer experience and improved management control.

July–September 2026 Workshop Operations Budget Summary

Stabilization Phase Budget | Management Presentation Sheet

Budget Summary by Category

Budget Area	July	August	September	Q3 Total
Employee Costs	₦16,000,000	₦16,900,000	₦16,000,000	₦48,900,000
Office Costs	₦2,472,000	₦2,662,000	₦2,472,000	₦7,606,000
Marketing Costs	₦850,000	₦850,000	₦850,000	₦2,550,000
Trainings	₦1,000,000	₦1,500,000	—	₦2,500,000
Spare Parts	₦5,000,000	₦3,000,000	₦5,000,000	₦13,000,000
Workshop	₦1,300,000	₦33,000,000	—	₦34,300,000
TOTAL	₦26,622,000	₦57,912,000	₦24,322,000	₦108,856,000

EV Readiness

₦30m allocated in August for tools, PPE, diagnostics preparation and minor/low-risk EV readiness.

Operational Stability

Budget supports staffing continuity, office running costs, procurement support, training and workshop readiness.

Q3 Total

₦108,856,000

Highest Month

August

Largest Project

EV Readiness ₦30m

Line Items Included
